## 1. File and Directory Management

- 1s List directory contents
- cd Change directory
- pwd Print working directory
- cp Copy files and directories
- mv Move or rename files and directories
- rm Remove files or directories
- mkdir Make directories
- rmdir Remove empty directories
- touch Change file timestamps or create empty files
- find Search for files in a directory hierarchy
- locate Find files by name
- tree Display directories in a tree-like format
- chmod Change file permissions
- chown Change file owner and group
- chgrp Change group ownership
- stat Display file or file system status

# 2. File Viewing and Editing

- cat Concatenate and display file content
- tac Concatenate and display file content in reverse
- more View file content interactively (page by page)
- less View file content interactively (scrollable)
- head Output the first part of a file
- tail Output the last part of a file
- nano Text editor (terminal-based)
- vim / vi Advanced text editors
- emacs Text editor
- grep Search text using patterns
- sed Stream editor for filtering and transforming text
- awk Pattern scanning and processing language
- cut Remove sections from each line of files
- sort Sort lines of text files

• uniq – Report or omit repeated lines

## 3. Process Management

- ps Report a snapshot of current processes
- top Display Linux tasks
- htop Interactive process viewer (advanced top)
- kill Send a signal to a process, typically to terminate
- killall Terminate processes by name
- bg Resume a suspended job in the background
- fg Bring a job to the foreground
- jobs List active jobs
- nice Run a program with modified scheduling priority
- renice Alter priority of running processes
- uptime Show how long the system has been running
- time Measure program running time

## 4. Disk Management

- df Report file system disk space usage
- du Estimate file space usage
- fdisk Partition table manipulator for Linux
- **1sblk** List information about block devices
- mount Mount a file system
- umount Unmount a file system
- parted A partition manipulation program
- mkfs Create a file system
- fsck File system consistency check and repair
- blkid Locate/print block device attributes

## 5. Networking

- ifconfig Configure network interfaces
- ip Show/manipulate routing, devices, and tunnels
- ping Send ICMP Echo requests to network hosts

- netstat Network statistics
- ss Socket statistics (faster than netstat)
- traceroute Trace the route packets take to a network host
- nslookup Query Internet name servers interactively
- dig DNS lookup utility
- wget Non-interactive network downloader
- curl Transfer data with URLs
- scp Secure copy files between hosts
- ssh Secure shell for remote login
- ftp File Transfer Protocol client

### 6. User and Group Management

- useradd Add a user to the system
- usermod Modify a user account
- userdel Delete a user account
- groupadd Add a group to the system
- groupdel Delete a group
- passwd Change user password
- chage Change user password expiry information
- whoami Print the current logged-in user
- who Show who is logged in
- w Show who is logged in and what they're doing
- id Display user and group information
- groups Show user's groups

## 7. System Information and Monitoring

- uname Print system information
- hostname Show or set the system's hostname
- uptime How long the system has been running
- dmesg Boot and system messages
- free Display memory usage
- top Display Linux tasks
- vmstat Report virtual memory statistics

- 1scpu Display information about the CPU architecture
- **1susb** List USB devices
- **1spci** List PCI devices
- 1shw List hardware configuration

## 8. Archiving and Compression

- tar Archive files
  - tar -czf archive.tar.gz /path/to/directory Compress files using gzip
  - tar -xzf archive.tar.gz Extract gzipped tarball
  - tar -cf archive.tar /path/to/directory Create a tarball
  - tar -xf archive.tar Extract tarball
- zip Package and compress files into a ZIP archive
- unzip Extract files from a ZIP archive
- gzip Compress files using the gzip algorithm
- gunzip Decompress files compressed with gzip
- bzip2 Compress files using the bzip2 algorithm
- bunzip2 Decompress files compressed with bzip2
- xz Compress files using the xz algorithm
- unxz Decompress files compressed with xz

## 9. Package Management (Depends on Distribution)

## Debian-based (e.g., Ubuntu)

- apt-get APT package handling utility
  - apt-get install <package> Install a package
  - apt-get update Update package list
  - apt-get upgrade Upgrade installed packages
  - apt-get remove <package> Remove a package
- apt-cache Query APT cache
  - apt-cache search <package> Search for a package
  - apt-cache show <package> Show package details

#### Red Hat-based (e.g., CentOS, Fedora)

- yum Package manager for RPM-based systems
  - yum install <package> Install a package
  - yum update Update installed packages
  - yum remove <package> Remove a package
- dnf Next-generation package manager (Fedora, CentOS 8+)
  - o dnf install <package> Install a package
  - o dnf update Update installed packages
  - o dnf remove <package> Remove a package

#### **General Commands**

- rpm RPM package manager
  - rpm -i <package.rpm> Install an RPM package
  - o rpm -e <package> Remove an RPM package
- dpkg Debian package manager
  - dpkg -i <package.deb> Install a Debian package
  - dpkg -r <package> Remove a Debian package

## 10. System Services and Daemon Management

- systemctl Control the systemd system and service manager
  - systemctl start <service> Start a service
  - systemctl stop <service> Stop a service
  - systemctl restart <service> Restart a service
  - systemctl enable <service> Enable a service to start on boot
  - systemctl disable <service> Disable a service from starting on boot
  - systemctl status <service> Check service status
- service Older service management command (used in nonsystemd systems)
  - service <service> start Start a service
  - service <service> stop Stop a service
  - service <service> restart Restart a service
  - service <service> status Check service status

## 11. Scheduling Tasks

- cron Daemon for running scheduled commands
  - ∘ crontab -e Edit cron jobs for the current user
  - ∘ crontab -l List the current user's cron jobs
  - crontab -r Remove the current user's cron jobs
- at Run commands at a specified time
  - o at 09:00 Schedule a command to run at 09:00 AM
- batch Run commands when the system load is low
- **sleep** Delay for a specified time
  - sleep 5s Sleep for 5 seconds

## 12. File Permissions and Security

- chmod Change file permissions
- chown Change file owner and group
- chgrp Change the group ownership of a file
- umask Set default permissions for new files
- setfac1 Set file access control lists (ACL)
- getfac1 Get file access control lists (ACL)
- sudo Execute a command as another user (usually root)
- visudo Edit the sudoers file safely
- passwd Change a user's password
- sudoers Manage sudo access for users
- gpasswd Administer group password
- ss Display socket statistics (for secure network connections)

### 13. System Backup and Restore

- rsync Remote file and directory synchronization
  - rsync -avz source/ destination/ Synchronize files
  - rsync -avz -e ssh source/ user@remote:/destination/ Sync over SSH
- cpio Copy files to and from archives
- dd Low-level copying and backup of entire filesystems

- dd if=/dev/sda of=/path/to/backup.img Backup a disk/partition
- dd if=/path/to/backup.img of=/dev/sda Restore a disk/partition

## 14. System Diagnostics and Troubleshooting

- dmesg Print the kernel ring buffer messages (system boot and hardware-related messages)
- journalctl Query and view logs from systemd's journal
- **strace** Trace system calls and signals
  - strace <command> Trace a command's system calls
- lsof List open files (useful for debugging)
  - ∘ Isof <file> Show processes using a specific file
- vmstat Report virtual memory statistics
- iostat Report CPU and I/O statistics
- mpstat Report CPU usage statistics
- pidstat Report statistics by process
- free Display memory usage
- uptime How long the system has been running
- watch Execute a program periodically, showing output
  - watch -n 1 free Watch memory usage every second
- 1shw List hardware configuration
- htop Interactive process viewer (better than top)
- netstat Network statistics (deprecated in favor of ss)
- ss Show socket statistics (more efficient than netstat)

### 15. Networking & Remote Management

- ifconfig Configure network interfaces (older command, replaced by ip)
- ip A more modern alternative for managing network interfaces and routing
  - ip addr Show IP addresses
  - ip link Show or manipulate network interfaces

- ip route Show or manipulate routing tables
- ss Display socket statistics (useful for diagnosing network issues)
- nmap Network exploration tool (can be used for security auditing)
- telnet User interface to the TELNET protocol (less common nowadays)
- nc (Netcat) Network utility for reading and writing from network connections
  - onc-l-p 1234 Listen on port 1234
  - o nc <host> <port> Connect to a host and port
- iptables Administration tool for IPv4 packet filtering and NAT (Network Address Translation)
- firewalld Frontend for managing firewall rules (used in some distros like Fedora and CentOS)
- ufw Uncomplicated firewall (front-end for iptables)
  - ufw enable Enable firewall
  - ufw allow <port> Allow traffic on a specific port
- tcpdump Command-line packet analyzer
- curl Transfer data from or to a server using various protocols (HTTP, FTP, etc.)
- wget Download files from the web via HTTP, HTTPS, FTP
- scp Secure copy over SSH (used to copy files between systems)
  - scp file.txt user@remote:/path/to/destination/ Copy file to remote server
- rsync Remote file and directory synchronization (often used for backups)
  - rsync -avz /local/path/ remote:/remote/path/ Sync directories

## 16. Text Processing Utilities

- grep Search for patterns within files
  - grep 'pattern' file.txt Search for a pattern in a file
  - grep -r 'pattern' /dir/ Recursively search for a pattern

- sed Stream editor for filtering and transforming text
  - sed 's/old/new/g' file.txt Replace old with new globally
- awk A powerful text processing language
  - awk '{print \$1}' file.txt Print the first column of each line in a file
- cut Remove sections from each line of a file
  - cut -d ':' -f 1 /etc/passwd Print the first field of each line, delimited by ":"
- sort Sort lines of text files
  - sort file.txt Sort file content in ascending order
- uniq Report or omit repeated lines in a file
  - sort file.txt | uniq Sort and remove duplicate lines
- tee Read from standard input and write to standard output and files
  - echo "text" | tee file.txt Write to file and show output on screen
- tr Translate or delete characters
  - echo "hello" | tr 'a-z' 'A-Z' Convert lowercase to uppercase
- paste Merge lines of files
  - paste file1.txt file2.txt Combine lines of file1 and file2 side by side
- wc Word, line, character, and byte count
  - wc -l file.txt Count lines in a file
  - wc -w file.txt Count words in a file

## 17. System Shutdown and Reboot

- shutdown Shut down the system
  - shutdown -h now Immediately shut down
  - shutdown -r now Reboot the system
  - shutdown -h +10 Shut down after 10 minutes
- reboot Reboot the system
- halt Halt the system immediately (equivalent to turning off power)
- poweroff Power off the system

- init Change the runlevel (old-style system manager)
  - ∘ init 0 Shutdown
  - init 6 Reboot

## 18. File System Mounting and Management

- mount Mount a file system
  - mount /dev/sda1 /mnt Mount partition to a directory
- umount Unmount a file system
  - umount /mnt Unmount the file system mounted at /mnt
- fstab File system table (configuration file for mounting file systems)
  - /etc/fstab View and configure persistent mount points
- blkid Display block device attributes
- fsck Check and repair a file system
  - fsck /dev/sda1 Check and repair /dev/sda1

## 19. Filesystem Permissions and Security

- chmod Change file permissions
  - chmod 755 file.txt Give read, write, and execute permissions to owner, and read-execute permissions to others
- chown Change file owner and group
  - chown user:group file.txt Change owner and group of a file
- **chgrp** Change group ownership of a file
  - chgrp group file.txt Change the group of a file
- umask Set default permissions for new files
  - umask 022 Set default permissions for newly created files to 755
- setfac1 Set access control lists (ACL) for file permissions
- getfac1 Get access control lists (ACL) for file permissions

#### 20. Containerization and Orchestration

#### **Docker**

- docker Docker command-line interface (CLI) for managing containers
  - o docker run <image> Run a container from an image
  - docker ps List running containers
  - docker ps -a List all containers, including stopped ones
  - o docker build -t <image\_name> . Build an image
    from a Dockerfile
  - docker exec -it <container\_id> bash Start an interactive bash shell inside a running container
  - o docker stop <container\_id> Stop a container
  - o docker rm <container\_id> Remove a container
  - o docker logs <container\_id> View logs of a container
  - docker images List available images
  - docker rmi <image\_name> Remove an image
  - o docker network 1s List Docker networks
  - docker-compose Manage multi-container Docker applications
    - docker-compose up Start up a multi-container environment
    - docker-compose down Stop and remove containers created by docker-compose
    - docker-compose logs View logs from containers managed by docker-compose

### **Kubernetes (k8s)**

- kubect1 Command-line tool for interacting with Kubernetes clusters
  - kubectl get pods List pods in the current namespace
  - kubectl get nodes List nodes in the cluster
  - kubectl get services List services in the cluster

- kubectl apply -f <file>.yaml Apply configuration from a file (e.g., a deployment or pod configuration)
- kubectl create -f <file>.yaml Create a resource from a file
- o kubectl delete -f <file>.yaml Delete a resource defined in a file
- kubectl exec -it <pod\_name> -- bash Execute a command inside a pod (e.g., open a shell)
- kubectl logs <pod name> View the logs of a pod
- kubectl describe pod <pod\_name> Get detailed information about a pod
- kubectl scale deployment <deployment\_name> -replicas=<number> Scale a deployment to the desired
  number of replicas
- kubectl rollout restart deployment
   <deployment\_name> Restart a deployment
- kubectl port-forward pod <pod\_name>
   <local\_port>:<remote\_port> Forward a port from a
   pod to localhost

#### **Helm**

- helm Kubernetes package manager for deploying applications
  - o helm install <release\_name> <chart\_name> Install a Helm chart
  - o helm upgrade <release\_name> <chart\_name> Upgrade a Helm release
  - helm list List all Helm releases
  - helm delete <release\_name> Delete a Helm release
  - o helm search <chart\_name> Search for a Helm chart

## 21. Automation and Configuration Management

#### **Ansible**

ansible – Automation tool for configuration management

- ansible all -m ping Ping all hosts defined in the inventory
- ansible-playbook playbook.yml Run an Ansible playbook
- o ansible -m command -a 'command' <host> Run a single command on a target host
- ansible-playbook --check playbook.yml Dry-run a playbook to see what would change
- ansible-playbook --limit <host> playbook.yml Run a playbook on a specific host or group
- ansible-playbook --extra-vars "key=value" Pass extra variables to a playbook

#### **Terraform**

- terraform Infrastructure as code tool for provisioning and managing cloud resources
  - terraform init Initialize a working directory for Terraform configuration
  - terraform plan Show an execution plan (preview of what changes will be made)
  - terraform apply Apply the changes described in a Terraform configuration
  - terraform destroy Destroy infrastructure created by Terraform
  - terraform validate Validate the configuration files
  - terraform show Show the current state of the infrastructure

#### **Puppet**

- puppet Configuration management tool
  - puppet apply <manifest.pp> Apply a Puppet
    manifest locally
  - puppet agent --test Test the Puppet agent (can be used to run a one-off run)

 puppet resource – Show the current state of resources (files, services, etc.)

## 22. CI/CD Tools and Commands

#### **Jenkins**

- **jenkins** Continuous integration tool
  - java -jar jenkins.war Start Jenkins from a WAR file
  - Access Jenkins through http://localhost:8080 by default

#### GitLab CI

- .gitlab-ci.yml Configuration file for GitLab CI/CD pipelines (typically resides in your repository)
  - gitlab-runner register Register a new runner with GitLab
  - gitlab-runner run Run the GitLab Runner to process jobs

#### **GitHub Actions**

- GitHub Actions uses YAML configuration files (typically located in .github/workflows/)
  - actions/checkout@v2 Checkout the repository code in your CI pipeline
  - actions/setup-node@v2 Setup Node.js for use in a pipeline
  - docker/setup-buildx-action@v1 Set up Docker
     Buildx for building multi-platform images

#### 23. Cloud Services

### **AWS CLI (Amazon Web Services)**

- aws Command-line tool for managing AWS services
  - aws configure Configure AWS CLI with your credentials

- aws s3 cp file.txt s3://bucket-name/ Copy a file to an S3 bucket
- aws ec2 describe-instances Describe EC2 instances
- o aws ec2 start-instances --instance-ids <id> Start an EC2 instance
- o aws ec2 stop-instances --instance-ids <id> Stop an EC2 instance
- aws s3 sync Sync directories with an S3 bucket

#### **Azure CLI (Microsoft Azure)**

- az Command-line tool for managing Azure services
  - az login Log in to your Azure account
  - o az vm list List all virtual machines
  - o az vm start --name <vm\_name> --resource-group
    <resource\_group> Start an Azure VM
  - az storage blob upload Upload files to an Azure blob storage
  - az group create Create a new resource group in Azure

### **Google Cloud SDK (gcloud)**

- gcloud Command-line tool for Google Cloud Platform
  - gcloud auth login Log in to Google Cloud
  - gcloud compute instances list List compute instances
  - gcloud compute instances stop <instance\_name>Stop a Google Cloud VM instance
  - gcloud app browse Open the current Google App Engine application in a browser

### 24. Logging and Monitoring

#### **Prometheus**

- prometheus Open-source system monitoring and alerting toolkit
  - prometheus Start Prometheus server (usually runs as a service in the background)
  - o prometheus --config.file=<config\_file> Start Prometheus with a specific config file

#### **Grafana**

- grafana-cli Command-line interface for managing Grafana plugins
  - o grafana-cli plugins install <plugin-name> Install a plugin in Grafana

#### **ELK Stack (Elasticsearch, Logstash, Kibana)**

- elasticsearch Search engine for logging and data analytics
  - curl -XGET
    - 'localhost:9200/\_cluster/health?pretty' Get
      cluster health status
- logstash Server-side data processing pipeline
  - logstash -f <config\_file> Run Logstash with the specified configuration file
- kibana Web interface for visualizing Elasticsearch data
  - Kibana is generally accessed through a web browser (http://localhost:5601)
